Waica

In 1913, Koch-Grünberg[5] had observed that Yanoaman was different from Cariban and that it apparently represented an isolated language. While this opinion was shared by the majority of authors who subsequently referred to the language, two American linguists have recently broken with this tradition by forwarding suggestions of possible affiliations. Greenberg[6] classified "Shirianá" as a distinct group belonging to the "*Chibchan proper*," subfamily of the "*Macro-Chibchan*" family, and Swadesh[7] established a "*Macro-Siriana*" with an internal separation of 50 mc, including Chapacuran (27 mc), and Sirianá (21 mc). He later suggested (personal communication) that Waraoan should also be reckoned in "*Macro-Siriana*," which would increase the internal divergence of this microphylum to that of 72 mc. Since the latter suggestion is of major interest to the distribution of the Diego antigen, we shall return to the discussion of the same after having presented the material on the Waica blood groups.

Cultural aspects. The Yanoama are a semi-nomadic forest people who rely for their subsistence chiefly on hunting, gathering, and arboriculture. Fishing is of a very subordinate importance and only peripheral groups, such as the northern Sanemá, have adopted agriculture from neighboring tribes. Although arboriculture is of vital importance among most of the Yanoama subtribes (plantains [*Musa paradisiaca normalis*], and pupunha [*Guilielma gasipaes*]), there can be little doubt that the basic economic and cultural pattern of the Yanoama has remained essentially on a Paleo-Indian culture level of the early hunting peoples of South America.

Yanoama technology is very little developed. The Waica produce thick-walled conical cooking pots, and Yanoama women make large twined carrying baskets. Cordage, belts, and one type of hammock are made of planted cotton, but weaving and metal work of any kind is unknown. Recently, several Yanoama groups have learned how to make dugout canoes, but their crafts and paddles still lack the perfection of the same artifacts among their masters (e.g. Caribs). Very long bows and arrows are the main weapons of these Indians, but stick-clubs may antedate the former.[8]

The local groups of the Yanoama are composed of bands of several extended families with unclear family households. Residence rules have, as yet, not clearly been established, but judging from the Sanemá of the Erebato and from the

his jungle intimately—where to find palm dates, cocoa and brazil nuts in their season, and where game birds are most plentifully found. He hunts the herds of peccary, his ear, versed in all the sounds of the forest, detecting his prey before they detect him. When the water in the rivers is low he shoots his fish with arrows and when the sand banks are uncovered he hunts tortoise eggs buried in the sand. His interminable wanderings are limited only by his forest lore; he lives only for the day, his sole reserve of food being a small store of bananas brought from the village plantation.

Platanal

As we closed the shore our reception was tumultuous. From the high bank above us the Indians leaped yelling into the water and clambered on board, shaking themselves like wet dogs. Laughing and gesticulating they took hold of our mooring lines. Though some of us were a little overcome by this display of exuberance, Butrón was not in the least disconcerted. He knew that the Indians had long learned to associate him with machetes and *manioc*. As soon as it was possible to do so, Butrón had a basket of *manioc* and a dozen machetes carried ashore, and the Indians who had already begun to ransack our cargo left it and hurried ashore.

"*Shori! Manioco! Oji!*" they cried striking their bellies. They jostled round the basket, stuffing handfuls of the coarse flour into their mouths, their heads thrown back in ecstasy.

As the Walka have no knowledge of contriving the simplest of iron tools, or of grinding *manioc*, all such articles were highly valued objects of barter. So were matches, once they had been shown how to use them.

Butrón told them we wanted the large green bananas which are eaten cooked; the accepted tariff is three hands of bananas for one machete. Before long, we heard some of the natives making merry in the plantation, and made as if to follow them. But at once the others became suspicious and gestured to us to return to the river bank. We insisted and they became menacing, finally refusing to go on gathering the bananas if we did not desist.
